

step 1

You receive the antenna as shown in the pictures.

All arms are split in two and marked in pairs.

First put all the arms together to form the four arms of the antenna.

step 2

step 3

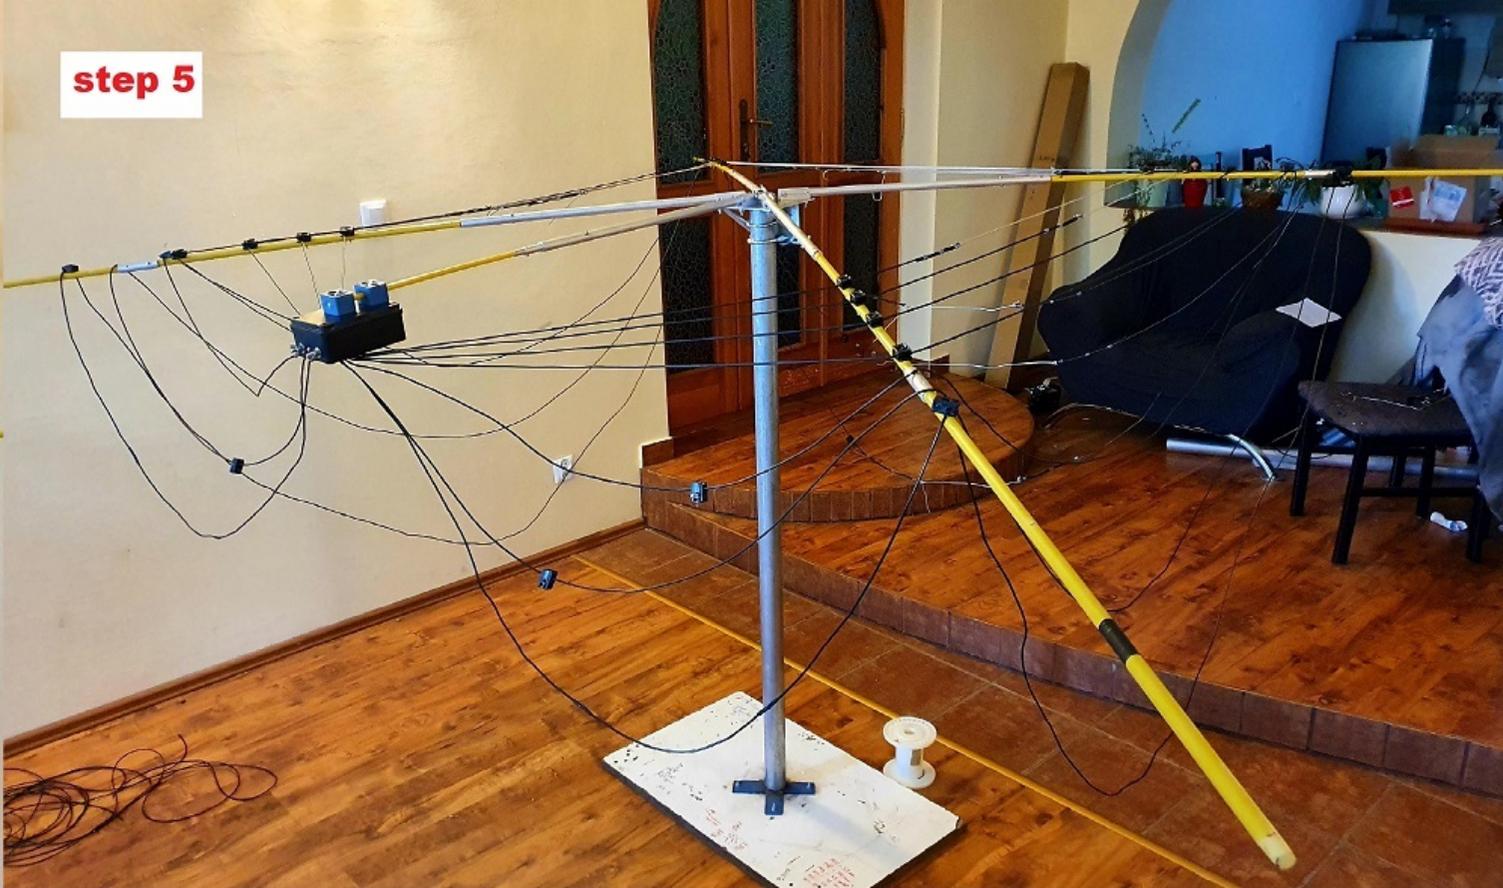

At this point, mount the central crossbar (antenna head) in a convenient manner and embed the antenna arms in the aluminium tubes as numbered.

step 4

Now we have to fit the box with the wires in the tube that we have left free. It is enough to put the cables on the antenna arms one by one from the shortest to the longest (from inside to outside)

step 5

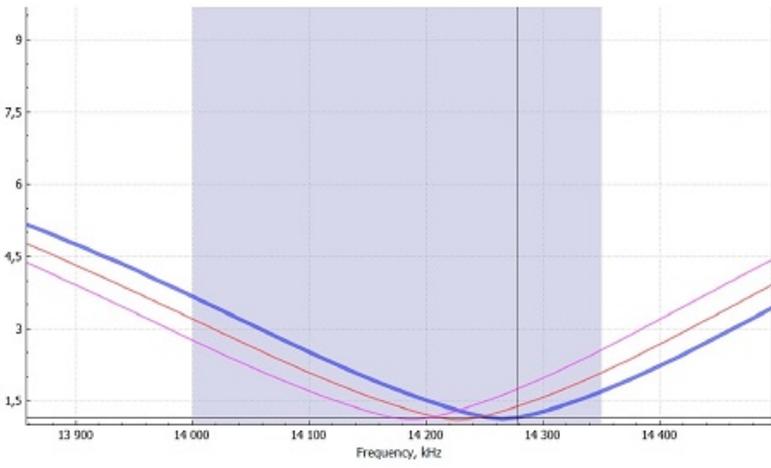

All cables are already unrolled.
The holders attaching the cable to the arms are already fitted to the cables. Simply fit them in place using the supplied stainless steel screws and nuts (25mm long).

step 6

Finally, we lock all the arms with the supplied M5 25mm screws, as seen in the last photo.

Antenna ready, I think the installation did not cause any problems.

The tuning method shown in the picture opposite is only for the 20m band.

For other bands it will be proportionally less, so tune all bands the same.

20m ~ 3cm

17m ~ 2cm

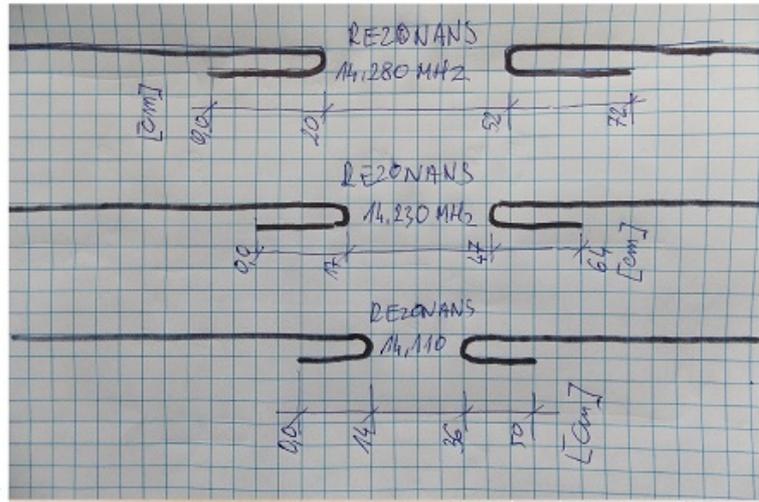

15m ~ 1.5cm

12m ~ 1.2cm

10m ~ 1cm

if you have any questions or suggestions, write to me directly on my

email: ulawisnia@o2.pl

Thank you for purchasing my antenna.

I think that covers it all but if you have any questions please feel free to ask directly via email.

bernicut@o2.pl or ulawisnia@o2.pl

If You or one of your friends is interested in buying it, I invite you to contact me directly.
